KASPR Framework Implementation

ORGANISATIONAL IMPLEMENTATION PROGRAMME

Flexible scope | Individual services, multi-site providers or wider organisations

ABOUT THE PROGRAMME

KASPR Framework Implementation supports services seeking a consistent, ketamine-specific approach to assessment, clinical decision-making and psychosocial intervention. It goes beyond standalone training by combining preparation, tailored delivery and ongoing support for everyday practice.

The programme can be commissioned in full or through selected elements, depending on organisational priorities, existing pathways and workforce needs.

WHO IS THIS PROGRAMME FOR?

Drug and alcohol treatment providers, service managers, commissioners and other organisations seeking to strengthen responses to emerging and established ketamine-related harm. No previous KASPR training is required.

SIX ELEMENTS OF IMPLEMENTATION

01 **Readiness Audit & Consultation**

Review current ketamine-related practice, workforce confidence, service pathways and readiness.

02 **Implementation Planning & Tailoring**

Agree priorities, responsibilities and appropriate adjustments to existing service arrangements.

03 **KASPR Practitioner Training**

Develop practitioner skills in recognising harm, structured intervention and recovery support.

04 **Clinical Practice Surgeries**

Provide follow-up opportunities to consolidate learning and discuss real-world practice challenges.

05 **Outcome Monitoring & Evaluation**

Agree feasible indicators and review arrangements for implementation, harm and stability.

06 **KASPR Practice Fidelity Review**

Offer developmental feedback on the consistency of KASPR-informed practice over time.

Implementation in practice

A PROGRAMME TAILORED TO YOUR SERVICE

Organisations differ in their ketamine-related caseloads, workforce experience and clinical pathways. Consultation provides the basis for agreeing the appropriate mix of practitioner training, implementation support and review.

KASPR is designed to work within existing service arrangements. The implementation plan is agreed with the commissioning organisation rather than requiring a separate treatment system.

EVALUATION AND QUALITY ASSURANCE

Implementation activity and changes in client outcomes are distinct questions. Data collection, review arrangements and relevant indicators are agreed in advance, taking account of existing service systems and information governance requirements.

Where commissioned, a proportionate practice fidelity review provides developmental feedback on whether KASPR principles and intervention approaches are being maintained in routine practice.

ASSESSMENT AND OUTCOME MEASUREMENT TOOLS

Organisational use of the KASPR Assessment and Change Snapshot is subject to separate licensing and implementation arrangements. Their development and evaluation status will be clarified within any proposal. Training or consultation alone does not confer a licence to use these instruments.

COMMISSIONING AND FEES

Organisations may commission the complete implementation pathway or selected elements. Programme scope and pricing are agreed by quotation, reflecting organisational size, the services involved, delivery arrangements and the level of follow-up support required.
